Active Count100H

Active Count 25H

The ActiveCount family is a set of high performance portable active air samplers suitable for use in cleanrooms and aseptic environments. They offer self-adjusting flow control to ensure accurate sampling, as well as continuous and periodic sampling modes for optimum sampling flexibility.
ActiveCount100H and ActiveCount25H come with HEPA filtered exhaust, a removable magnetic baseplate[1], a stainless steel sampling head and dust cover. All sampling heads, dust covers, and the removable magnetic baseplate[1] are autoclavable, which along with the sanitizable stainless steel enclosure ensure the ActiveCount will not contaminate your environments.

The ActiveCount HEPA units are truly ISO 14698 compliant with a d50 collection efficiency of 1 micron and HEPA filtered exhaust ports designed to avoid re-aspiration of sampled air.

The optional remote sample head minimizes disturbance of unidirectional airflow within a BSC or laminar flow bench and the gas sample option provides the versatility needed to accomplish all your critical sampling requirements.
